## CONTENTS:

### AMBIENTRACK – THE SYSTEM

- Wall pillar	4-5
- Corner pillar	6-7
- Skirting board duct	8-9
- Flat wall pillar	10-11
- Covers	12-14
- Multimedia terminals	15
- Tool box	16-17
- Skirting board	18-20
- Device support	22-23
- Wall pillar, compact   TV cable duct	24-25
- TV wall bracket	26-27
- Accessories	28-29

### AMBIENART – THE SYSTEM

- LED strip RGB	31-33	
- LED cube	36-37	
- LED wall spotlight	38	
- LED floor spotlight	39	
- Pendant lights	40	
- Overview of lighting components	41	
- RGB controller	42-43	
- 24 volt DC network adapter	44	<b>NEW!</b>
- LED Downlights	45	<b>NEW!</b>

### AMBIENTONE

- AmbienTone No. 4; No.1	46-47	
- AmbienTone No. 6	47	<b>NEW!</b>
- AmbienTone No. 2	48-49	
- AmbienTone No. 3	50-51	
- AmbienTone Q1	52-53	
- AmbienTone R1	54-55	
- AmbienTone Sub No. 2	56-57	<b>NEW!</b>

### AMBIENTRACK & AMBIENART TECHNOLOGY

- AmbienTrack installation concept	58-60
- Wall pillar configuration plan	61-65
- Intelligent building technology	66-67
- Plug&Play Installation	68
- Cost calculation   Efficiency	69
- Installation options   Ideas	70-73
- Light planning	74
- AmbienArt circuit design	75-78
- Overview of components	79

NOTE: Prices include VAT.

## AMBIENTRACK – THE SYSTEM

AmbienTrack consists of a variety of ducts made of aluminium, which can be installed on, or flush with, the walls. The ducts are given the task of running cables out of sight both horizontally and vertically in a room, and yet enabling access to the installation at any time. In addition, a number of the AmbienTrack ducts allow you to integrate all sorts of installation components variably, such as sockets, switches, operating controls, sensors, power supply units, distributor boxes and control electronics. The exceptional geometry with the shadow gap produces a free-floating effect and so reduces the impression of the duct's size. Further design features include high-quality materials and surfaces, as well as the installation of switches and sockets without the need for frames. As a further option, AmbienTrack can be upgraded into a light installation system for the entire room using LED components.

1. Wall pillar
2. Corner pillar
3. Corner pillar, half-height
4. Skirting board or skirting board duct
5. Wall pillar, flat, or wall pillar, compact
6. Device support
7. Ceiling spot
8. LED light line
9. LED cube

<b>Product images</b>		
<b>Brief description</b>	<p>The AmbientTrack wall pillar is made of aluminium and can be installed at half room height or at full room height. The wall pillar is used for guiding cables and for fitting installation components. The fixed installation of main circuits into the rooms ends in the wall pillar. The transition from a classic installation to flexible cabling is therefore effected in the wall pillar. It can be installed both surface-mounted and flush-mounted in the walls. It consists of a baseboard and cover panels with a width of 135 mm and various perforations. The surface is available in two finishes: natural aluminium and stainless steel look. The wall pillar includes the option of backlighting the shadow gap using the AmbientTrack LED strips, as well as installing the AmbientTrack LED spotlights or placing the rotating LED cube on top.</p>

<b>Brief description</b>	<p>The corner pillar is also fully made of aluminium and can be installed at half-height or room height in corner spaces. It boasts the same installation options as the wall pillar, and is also well suited for vertical installation over several floors. The same cover panels are used as for the wall pillar. The corner pillar provides the option of backlighting the shadow gap using the AmbienTrack LED strips, as well as installing the AmbienTrack LED spotlights or placing the rotating LED cube on top.</p>

<b>Product images</b>		
<b>Brief description</b>	<p>The AmbientTrack skirting board duct is installed on the floor and is a horizontal guide for cables, as well as a fitting for installation components near floor level. Combined with drywall construction, it is possible to partially integrate the skirting board duct into the wall. The baseboard is made of aluminium, and the same covers – available in natural aluminium and stainless steel finish – can be used as for the wall pillar. The special geometry of the skirting board duct yields two shadow gaps which can be backlit with the AmbientTrack LED strips. Furthermore, the AmbientTrack LED spotlights can be installed, or the rotating LED cube placed on top.</p>

<b>Brief description</b>	The same aluminium covers are used for the wall duct, corner duct, skirting board duct and the flat wall duct baseboard. There are two standard surface finishes (natural anodised and stainless steel). The covers are clipped onto the baseboard without screws. To match the various installation products and light modules, there are covers with the corresponding perforations. A special design feature is the frame-free installation of standard switch systems.

## AMBIENTRACK COVERS FOR THE WALL & CORNER PILLAR AND SKIRTING BOARD DUCT

### Switch systems

The table below shows an example of the AmbienTrack covers which should be used for particular manufacturer brands/switch systems.

Manufacturer	Cover 56x56	Cover 65x65	Cover 71x71
<b>Merten</b>	M smart M Arc M star M Plan M Plan II		
<b>Gira</b>	E2 Event Esprit standard 55		
<b>Jung</b>	AS 500 AS 500 antibacterial A 500 AS universal		L990 Anthracite LS Plus High-gloss chrome
<b>Busch Jaeger</b>		future future linear carat solo pure stainless steel	

### Maintenance

Clean the covers with a soft cloth only. If it is very dirty, you can use a neutral cleaning agent with a damp cloth. NEVER wash the profiles!

Brief description	To supplement AmbienTrack, we also offer a wide spectrum of fixed multimedia installations. The range consists of panel jacks and covers for easy integration of video and audio connections in standard switch systems or in AmbienTrack installations. The modular set-up allows any combination you wish.

<b>Product images</b>	
<b>Brief description</b>	<p>The tool box allows installation components such as switches, sockets, computer and speaker connections, sensors, operating elements and so on to be installed modularly in any combination in the AmbientTrack wall ducts, corner ducts and skirting board ducts. Furthermore, the tool box can be used as a distributor and branching box. The installation of power supply units and electronic components, e.g. for building automation, is also possible. The tool box is available in a variety of lengths, suitable for the respective installation situation. The entire box is made of plastic and sheathes all metallic parts of the installation components, providing protection against accidental contact even when the ducts are open. In addition, the box can be used to accommodate the control and electronic circuits for the AmbientTrack LED components.</p>
<b>Scope of delivery</b>	<p>Complete box, consisting of:</p> <ul style="list-style-type: none"> <li>• Tool box base section</li> <li>• Tool box base part</li> <li>• 2 x end sections, pre-stamped for cable outlets</li> <li>• Locking screws</li> <li>• Screws for end sections</li> <li>• Installation instructions</li> </ul>
<b>Product diagram</b>	<p>1 x tool box top part with corresponding cutouts</p> <p>1 x tool box base part</p> <p>2 x tool box end sections</p> <p>8 x tool box screws 3.5 mm x 16 mm for end sections</p> <p>2 x locking screws 3.9 x 16 mm</p>
<b>Formats, lengths</b>	<ul style="list-style-type: none"> <li>• Tool box 1-fold: 71 mm; Tool box 2-fold: 142 mm; Tool box 3-fold: 213 mm; Tool box 4-fold: 284 mm; Tool box 5-fold: 355 mm; individual formats on request</li> </ul>
<b>Material/Colours/Surfaces</b>	<ul style="list-style-type: none"> <li>• Top part and base part made of reground PVC</li> <li>• End sections made of PVS</li> </ul>
<b>Versions</b>	<ul style="list-style-type: none"> <li>• Empty box for use as a terminal and distributor box</li> <li>• Tool box with top part perforations, suitable for standard device systems</li> <li>• Box, pre-equipped with LED circuit electronics</li> <li>• Box, equipped with LED controller or power supply units</li> </ul>
<b>Installation</b>	<p>Wall pillar baseboard</p> <p>AmbienTrack cover</p> <p>Tool box</p>

Installation instructions	<p>Fit the required devices to the base part of the tool box and connect the cabling. Ensure that the support rings for the built-in devices slot into the groove of the base part.</p> 	<p>Pull the cables through the end sections and fix them in place with the strain relief (separate item). Screw the end sections to the base part of the tool box.</p> 	<p>Clip on the top part of the tool box.</p> 	<p>Attach the top (central panels) of the devices.</p> 																																																																																																																												
Accessories	<ul style="list-style-type: none"><li>Strain relief</li></ul>  <ul style="list-style-type: none"><li>See extra pages for complete installations and electronics for lighting systems</li></ul>																																																																																																																															
Tool box benefits	<ul style="list-style-type: none"><li>Modular installation (without screws) of standard switch systems in any combination</li><li>Easy insertion of support rings</li><li>Allows frame-free installation of switch systems (AmbienTrack cover replaces switch frames)</li><li>Complete covering of all metallic components in the built-in devices. This means no earthing of the AmbienTrack profiles is required.</li><li>For use as a terminal and distributor box</li><li>Installation of electrical components</li><li>Installation of LED circuit electronics</li><li>Complete pre-assembly possible -&gt; Plug&amp;Play installation</li><li>Easy to clip into the AmbienTrack profiles</li></ul>

<b>Product images</b>	 		
<b>Brief description</b>	<p>The AmbientTrack skirting board is used for horizontal distribution of cables in a room, which generally lead out of an AmbientTrack pillar. It is however also possible to feed into an AmbientTrack skirting board directly from the wall. The baseboard for the AmbientTrack skirting board is made of plastic and is completely covered by the aluminium top part, available in the surface finishes natural aluminium or stainless steel. The AmbientTrack skirting board provides the option of backlighting the shadow gaps with the AmbientTrack LED strips as well as installing AmbientTrack LED spotlights. It replaces the normal skirting board.</p>

<b>Installation options (sketch)</b>	<div style="display: flex; justify-content: space-around;"> <div data-bbox="491 1576 798 2029"> <p>Surface-mounted: Wall/masonry</p>  <p>Labels: Floor covering, Screed flooring, Unfinished floor</p> </div> <div data-bbox="829 1576 1244 2029"> <p>In-wall: Wall/masonry</p>  <p>Labels: Plaster thickness: approx. 22 mm, Plaster edge, 60 mm above the Floor covering, Floor covering, Screed flooring, Unfinished floor</p> </div> </div>		

Installation instructions	<p>General guidelines for assembling the joining strip:</p> <p>When installing the covers, start with the end or corner sections first so that as few of the cut edges as possible can be seen, and so these are camouflaged by the wall pillar cover.</p> <p>Assembly in combination with wall pillars:</p>			
	<p>Surface-mounted</p> <p>Use the wall and corner pillars with the SL cutout. Position the relevant cutout above the baseboard of the joining strip.</p> <p>Sequence:</p> <ol style="list-style-type: none"><li>1. Baseboard joining strip</li><li>2. Baseboard wall pillar</li><li>3. Wall pillar cover</li><li>4. Joining strip cover (flush cut)</li></ol> 	<p>Recessed</p> <p>Use wall pillars WITHOUT an SL cutout and embed into the wall with a clearance of 22 mm to the flange. Maintain 3–5 mm interval to the baseboard of the joining strip so that the SL cover can click into place. Discontinue the joining strip approx. 70–75 mm below the wall pillar. You can use the “SL wall pillar connection cover” here later. Adjust the flange of the baseboard so that it has a clearance of 22 mm from the wall.</p> <p>Notes on recessed and in-wall installation:</p> <p>Take the thickness of the wall plaster into consideration when planning the installation depth for the wall pillars.</p> 	<p>In-wall</p> <p>Use wall pillars WITHOUT the SL cutout and mount them flush into the wall all the way to the flange. Maintain a 3–5 mm interval to the baseboard of the joining strip so that the SL cover can click into place. Discontinue the joining strip approx. 70–75 mm below the wall pillar. You can use the “SL wall pillar connection cover” here later.</p> 	
Accessories	<p>Outer corner:</p> 	<p>End sections (left/right):</p> 	<p>Device support:</p> 	<p>LED tubes:</p> 

<b>Product images</b>	
<b>Brief description</b>	<p>The AmbienTrack device support is installed on the skirting board and allows you to vary the position of sockets, a computer or multimedia connections. It can also be easily added to at a later date. The devices support are made of aluminium, in the natural aluminium or stainless steel surface finish. The AmbienTrack device support offers the option of backlighting the shadow gaps with the AmbienTrack LED strips as well as installing AmbienTrack LED spotlights to illuminate the walls.</p>
<b>Scope of delivery</b>	<p>Complete set, consisting of:</p> <ul style="list-style-type: none"> <li>• Baseboard</li> <li>• Cover</li> <li>• End section</li> <li>• Tool box 2-fold:</li> </ul>
<b>Product diagram</b>	
<b>Material/Colours/Surfaces</b>	<p>Baseboard</p> <ul style="list-style-type: none"> <li>• Anodised natural aluminium E6EV1</li> </ul> <p>Cover and end section:</p> <ul style="list-style-type: none"> <li>• Anodised natural aluminium E6EV1</li> <li>• Aluminium stainless steel finish</li> </ul>
<b>Versions</b>	<ul style="list-style-type: none"> <li>• 2-fold perforation for switch systems with 55x55 central plates</li> <li>• 2-fold perforations for switch systems with 64x64 central plates</li> <li>• 2-fold perforations for switch systems with 71x71 central plates</li> </ul>

Installation options (sketch)	<div>Surface-mounted</div> <div></div>																																																																																										
Installation instructions	<div>Fit the baseboard for the device support to the position of your choice on the wall. Position the cutout above the baseboard of the skirting board. Remove the cover of the skirting board first.</div> <div></div>	<div>Insert the cables from the skirting board into the device support and wire them to the tool box. Then clip the pre-equipped and wire tool box into place and secure it.</div> <div></div>	<div>Put on the cover and the end section of the device support. The covers of the skirting board are fitted flush.</div> <div></div>																																																																																								
Product benefits Device support	<ul style="list-style-type: none"><li>• Designer cable duct system</li><li>• Variable positioning of sockets and other connections</li><li>• No cutting into walls when relocating or adding to sockets</li><li>• Installation of standard socket systems</li><li>• Surface-mounted shadow gap creates a free-floating impression</li><li>• No fingerprints on the surfaces</li><li>• Screwless clip cover assembly</li><li>• Upgrading to wall spotlight with LED end section</li><li>• LED light lines can be added</li></ul>

<b>Product images</b>		
<b>Brief description</b>	<p>The compact wall pillar is also used for guiding cables and is usually surface-mounted. It has a slimmer design than the flat wall pillar. The baseboard for the WA OT90 is made of plastic and is completely covered by the aluminium top part, available in the surface finishes natural aluminium or stainless steel. The WS OT90 provides the option of backlighting the shadow gaps with the AmbientTrack LED strips as well as installing AmbientTrack LED spotlights.</p>	
<b>Purchase order options</b>	<p>Set, consisting of baseboard and cover</p>

# AMBIENTECH TV WALL BRACKET

<b>Product images</b>		
<b>Brief description</b>	<p>Today's powerful home entertainment products can do just about anything, that is, except blend in with the room. Our innovative fixture solutions can position your LCD or plasma TV exactly where it looks best in the room. All the positions are VESA compatible and suitable for practically any screen size and any model on the market. For the highest possible convenience and freedom of movement.</p>	
<b>Purchase order items</b>	<p>TV wall bracket no. 1</p> 	<p>TV wall bracket no. 2</p>

## AMBIENART – THE SYSTEM

AmbienArt, the lighting building blocks for AmbienTrack, now makes it possible, for the first time, to locate the power plugs you need for light sources flexibly and in the right places within a room – and to retrofit them as well.

And with the new lighting components, the matching products are available to solve diverse types of problems. AmbienArt creates new levels of freedom to turn a room into an attractive living environment. A simple white surface is transformed into a dynamic, illuminated object by AmbienArt.

Complementing a general or background light, AmbienArt allows the key light, which is so important to the room's overall effect, to be installed, and so determine where the observer's attention and perception will be guided. The LED cubes, for example, generate a comfortable atmosphere in the room with their attractive light and shadow play in suitable colours, and highlight certain objects or wall surfaces.

Using the LED strips, which are placed in the characteristic shadow gaps of the AmbienTrack ducts, fascinating lines of light – with a dynamic change of colour – are created, which can also be used as an orientation feature. A variety of scene settings allow you to lend the same room the right mood for an evening of TV, or add that special touch for a party on another occasion.

The minimalistic design of the entire AmbienTrack system has also been retained for the LED cubes. Great light is produced with the smallest dimensions. The complete system allows any number of variable combinations, so that the rotatable spotlights can be positioned at exactly the right height and with the right angle of illumination.

AmbienArt is especially interesting for older buildings, where attractive lighting concepts can be realised without having to cut into and knock down walls. Only the most modern, energy-efficient LEDs are used as light sources. These now feature a very high light flux, in combination with a longer life span, and a considerably improved light yield in comparison to standard illuminants such as light bulbs or halogen lamps. In addition, the play of colours the LEDs create provide innovative and previously unimagined interior design options.

## NOTES

Product images																																																											
Brief description	The LED cubes have an edge length of just 30 mm, can be rotated by 360° and can be individually combined and can be placed and replaced on the AmbienTrack profiles anytime. The matching jacks with the LED circuit electronics are installed ready to connect to the AmbienTrack tool boxes. The focused light beam from the cube, with an illumination angle of 20°, is generated using power LED technology. The LED cube is available in both a monochrome and RGB version, which is a distinctive feature in this size. The power is supplied and the cube activated using the 24-volt power supply unit and the controller/dimmer from the AmbienTrack range. Ceilings, walls, accessories and even entire rooms can now be accentuated with cool or warm light colours according to preference.

# AMBIENART PLUG-IN BASE FOR THE LED CUBE

<b>Brief description</b>	<p>The AmbienArt plug-in base performs both the electrical adjustment as well as the mechanical adaption of the LED cubes. They fit into the AmbienTrack tool box perfectly, where an adapter fitting guides the pluggable connections out of the tool box.</p> <p>In combination with the in-wall covers, available separately, the plug-in base and the LED cube can be installed in standard in-wall sockets independently of the AmbienTrack system.</p> <p>There are three different base modules:</p> <p><b>1) AmbienArt plug-in base Master monochrome</b></p> <p>The Master plug-in base contains the constant current converter required for the LED cube (24 volt → 350 mA) and can be dimmed by PWM. A DIP switch allows you to decide which system channel the LED cube reacts to. The Master plug-in base can power up to four further LED cubes using Slave plug-in bases.</p> <p><b>2) AmbienArt plug-in base Slave monochrome</b></p> <p>The Slave plug-in base is for extending the Master plug-in base (see above). It can also be used as a purely mechanical plug-in base for activating the LED cubes using other systems. CAUTION: In this case, it must be activated using 350 mA constant current!</p> <p><b>3) AmbienArt plug-in base RGB</b></p> <p>This plug-in base has been designed especially for the LED cubes RGB. It contains a separately-dimmable constant current converter for every colour channel (red, green and blue). It is activated using PWM.</p>

## AMBIENART LED WALL SPOTLIGHT

Product images	<div></div>																																																																								
Brief description	<p>A powerful LED spotlight in monochrome and RGB versions which is integrated into the end sections of the wall and corner pillars, as well as the device support. The beam of light emerging from the front face of the profile is generally directed towards the ceiling, and produces a fascinating light reflection on the wall – in particular during the dynamic colour changes. The power is supplied and the cube activated using the 24-volt power supply unit and the controller/dimmer from the AmbientTrack range. The extraordinary combination of light with sockets, loudspeakers and other connections underlines the innovative character of the AmbienTrack system and illustrates the intrinsic value of the entire installation.</p>																																																																								
Product benefits	<ul style="list-style-type: none"><li>• Power LED technology</li><li>• Spots produce a unique light reflection (side light)</li><li>• Available in monochrome or RGB version</li><li>• Different colour combinations possible</li></ul>

Product images	<div></div> <div></div> <div></div> <div></div>																				
Brief description	<p>Most sources of light are placed in the upper parts of rooms. However, an important function of light – providing orientation and attracting attention – cannot always be optimally realised. In the floor area, it is often especially important to point out any trip hazards or steps, and to define paths. Using AmbienArt LED floor spotlights, which are installed flush-mounted into the AmbienTrack skirting boards or skirting board ducts, this function can also be mastered to perfection. They can be installed or retrofitted anytime by simply replacing the standard duct covers with panels which feature the LED floor spotlights. There are a number of combinations defined in the standard range. However, it is also possible to determine the interval and the number of spots installed individually. The floor spotlight is available in the colours white and warm white. The power is supplied and they are also activated using the 24-volt power supply unit and the controller/dimmer from the AmbientTrack range. The floor spotlights can also be used alternatively – or complementary to – the light lines as an orientation aid.</p>																				
Product benefits	<ul style="list-style-type: none"><li>• Power LED technology</li><li>• Available in white and warm white</li><li>• Ideal for illuminating trip hazards or steps</li><li>• Provides orientation in hallways and corridors</li><li>• Spots create unique light reflections on the floor. (raking light)</li></ul>																				
Combinations/components	<ul style="list-style-type: none"><li>• Skirting board duct</li><li>• Skirting board</li></ul>

## AMBIENART LED PENDANT LIGHTS

Product images	<div></div> <div></div>																
Brief description	<p>The building block principle of the entire AmbientTrack system, including the lighting components, makes it possible to create diverse lighting solutions and even individual lamps. An example of this is the pendant light, which is comprised of an AmbientTrack profile and 5 LED cubes. The LED cubes are not simply fitted onto the profile, but rather connected together using a very thin low-voltage cable, which at the same time forms the lamp pendulum. Of course, individual variations in the number of LED cubes, pendant interval and length of the pendants are very easy to implement. The LED cubes are also interchangeable on the pendant lights. The power is supplied and they are also activated using the 24-volt power supply unit and the controller/dimmer from the AmbientTrack range.</p>																
Product benefits	<ul style="list-style-type: none"><li>• Power LED technology</li><li>• Provides elegant lighting, for example above the dining table</li><li>• Pendants are interchangeable</li><li>• Number, length and interval of the pendants are individually adaptable</li><li>• Indirect ceiling lighting with RGB colour change</li></ul>

## BASIC PRINCIPLE FOR THE DESIGN AND DEVELOPMENT OF THE AMBIENART LIGHTING COMPONENTS:

### SYSTEM PRINCIPLE:

AmbienArt is both installation system as well as interior design element. The profiles are used as a platform for diverse lighting functions. Just a few lighting modules make a versatile application spectrum possible.

### ENERGY EFFICIENCY:

State-of-the-art technology goes together with modern design. Therefore only high-quality LED light is used for the AmbienArt lighting function. LEDs are far superior to standard light sources both in energy efficiency and their fields of application. (up to 200 lm/watt)

### MINIMALISTIC DESIGN:

In keeping with the AmbienTrack profiles, the AmbienArt lighting elements have been streamlined down to the essentials. Clear, right-angled geometries define the design. Connections without any change in wall thickness and as few visible joints as possible are the features distinguishing them from standard systems.

1. Skirting board light lines
2. LED wall spotlight – Device support
3. Pendant lights
4. LED wall spotlight – Pillar
5. Skirting board light line
6. Corner pillar light line (top/bottom)
7. Floor spotlight
8. Flat wall pillar light lines
9. LED cube

# AMBIENART RGB-CONTROLLER

Product image	 
Brief description	<p>The AmbienArt light system is controlled by a RGB controller, which takes care of the colour setting, changing the colour or dimming the light components. The controller is elegantly integrated into the wall pillars along with the tool box and can be easily operated by remote control. The power is supplied using the 24-volt system power supply unit. The controller's user interface is very high quality and has a clear layout, and can be combined with any switches and sockets.</p>
Purchase order items	<p>Complete set consisting of:</p> <ul style="list-style-type: none"> <li>• Module with front plate and buttons</li> <li>• Remote control</li> <li>• Plug-in connection terminals</li> <li>• End section with cutouts for AmbienTrack tool box</li> <li>• Operating manual</li> </ul> <p>Versions with central panels 55x55, 64x64 and 71x71</p>
Individual elements/scope of delivery	
Technical data	<ul style="list-style-type: none"> <li>• Operating voltage: 12–24 volts</li> <li>• Output current: 2 amperes per channel (3 x 2 A)</li> <li>• Dimensions: approx. 71 x 71 x 20(13) mm</li> <li>• Weight: approx. 70 g</li> </ul>
Material/Colours/Surfaces	<ul style="list-style-type: none"> <li>• Front plate: Stainless steel finish</li> </ul>
Combinations/components	<p>Can be installed in the tool box in combination with standard switch systems.</p>
Accessories	<p>AmbienTrack tool box:</p>  <p>RGB Repeater 12-24 Volt: 165x40x26mm</p>  <p><b>NEW!</b></p>
Handling and installation instructions	<p>The controller must always be positioned at the upper end of the tool box.</p>

<b>Product benefits</b>	<ul style="list-style-type: none"><li>• 3 channels (open collector to negative)</li><li>• 8 preset colours</li><li>• Individual adjustment of the static colour mix</li><li>• For operating voltages from 12 to 24 volts</li><li>• 2 ampere output current per channel</li><li>• Energy-saving PWM dimmer (pulse width modulation)</li><li>• 10 automatic programs</li><li>• Interval period can be set from 0.5 to 500 seconds</li><li>• Cross-fading time can be set from 0.5 to 500 seconds</li><li>• Brightness can be set from 0 to 100% in 10 levels</li><li>• Elegant control panel with 12 buttons</li><li>• Aluminium front plate in stainless steel finish</li><li>• IR remote control</li><li>• Suitable for AmbienTrack tool box</li><li>• Can be combined with other switch systems within the AmbienTrack tool box</li><li>• Available in the cutout dimensions 56x56   65x65   71x71</li></ul>																												
<b>Functions</b>	<p>The RGB controller module features three different basic functions:</p> <p><b>1. Preset static colour</b></p> <p>The following eight colour mixes are stored permanently: Red, green, blue, white, cyan, magenta, yellow, amber</p> <p>These can be directly activated in succession using the remote control, or using the PRESET button on the module.</p> <p><b>2. Individual static colour mix</b></p> <p>Using the buttons Red, Green, Blue (using ▲ ▼ respectively), a personal favourite colour can be set.</p> <p><b>3. Program functions</b></p> <p>The program function features ten colour palettes for automatic colour blends. Brightness, interval and cross-fading time can each be adjusted in 10 levels.</p> <div></div> <p><b>Special functions:</b></p> <p><b>1. Last call</b></p> <p>The module saves the last setting and activates this when switched on again, even after being completely disconnected from the mains supply.</p> <p><b>2. 100% ON</b></p> <p>This button on the module switches all three colours/channels to 100% (white). This function is used for quick orientation.</p>

<b>Product images</b>				
<b>Brief description</b>	<p>AmbienTone is a flat panel loudspeaker in a modified gypsum plasterboard. It is installed in drywall constructions. In very few work steps. Once connected, fitted and sealed, AmbienTone can be wallpapered over, painted and even plastered over. A coat with a thickness of up to 2 mm will result in only a minimal loss of sound quality.</p>			
<b>Handling and installation instructions</b>	<p><b>Step 1:</b> Install the metal stand wall. At the corresponding positions, make a frame construction for the AmbienTone panels, so that these can be secured on all sides with screws.</p> <p><b>Step 2:</b> Insert the soundproofing material and cover the metal stand wall with plasterboards. Be sure to connect the AmbienTone panel before inserting it.</p> <p><b>Step 3:</b> Secure the AmbienTone panel on all sides with screws. A functional test is then recommended to check the wall for vibrations.</p> <p><b>Step 4:</b> Fill the gaps and smoothen them.</p> <p><b>Step 5:</b> Complete the wall with a finish of your choice. Of course, the scope of delivery also includes full assembly instructions. The figure below provides an overview.</p>

## AMBIENTONE NO. 6 | FOR INSTALLING IN SOLID WALLS

NEW!

Product images	<div></div> <div></div> <div></div>												
Brief description	<p>AmbienTone No.6 is a speaker module for invisible integration in solid walls. The flat-panel speaker constructed according to the principle of the bending wave converter. The module is embedded into a niche constructed in the wall and plastered over completely. Available as an option in a 100 V model.</p> <p><b>Note:</b> the design of the AmbientTone No.6 module ensures an extremely high decoupling between the membrane surface and the surrounding surface of the wall. However, structure-borne sound which spreads through the walls can still occur, depending on the construction and workmanship of the masonry. Before installing the panel, check the static function of the wall you would like to use.</p>

<p><b>Product images</b></p>	
<p><b>Brief description</b></p>	<p>The Ambientone No. 2 universal modules blend in indiscernably with panelling materials such as MDF, wood or chipboard. Panelling materials such as parts of a multimedia wall, or wall or ceiling cladding sections, are prepared in a way which allows the self-adhesive Ambientone No. 2 to be installed on the back of these and the front side of the panelling material is used as a surface membrane. This means the Ambientone No. 2 surface loudspeaker can be integrated into wood panelling, furnishings, etc., remaining out of sight and without visible joints.</p>
<p><b>Handling and installation instructions</b></p>	<p><b>Step 1:</b> Reduce the panel thickness by surface milling the back to a thickness of 4 mm. The milled surface must be sanded smooth and painted to ensure optimum grip on the adhesive surface of the Ambientone No. 2 universal module.</p> <p><b>Step 2:</b> Remove the transport locks found on the back of the Ambientone No. 2 universal module. Remove the silicone paper from the adhesive surface on the front.</p> <p><b>Step 3:</b> Insert the Ambientone No. 2 universal module into the surface milled area, making sure that the self-adhesive membrane rests against the milled surface of the panelling material.</p> <p><b>Step 4:</b> Make sure to connect the loudspeaker before you attach the panelling material! When installing the panelling material, pay special attention that no loose parts are situated in or on the substructure or are in contact with these, and that nothing is in contact with the loudspeaker on the rear.</p> <p>Of course, the scope of delivery also includes full assembly instructions. The figure below provides an overview.</p> <div data-bbox="1177 967 1326 1592">  </div>

<p><b>Product images</b></p>	
<p><b>Brief description</b></p>	<p>The AmbientTone No. 3 is a Plug&amp;Play loudspeaker for the AmbientTrack wall and corner pillars. Its elegant and unobtrusive design is perfectly suited to the AmbientTrack system. Sound engineering can now be integrated inconspicuously and appealingly into the room set-up. The pillar loudspeaker is easy to clip into the wall or corner pillar, and can be connected to standard hi-fi amplifiers or a surround receiver. It is ideal for background music, for example in the kitchen, living and dining room or in open spaces, such as galleries or restaurants. It is also designed for stereo and home cinema applications. The AmbientTone No. 3 pillar loudspeaker is available in all the standard AmbientTrack designs, aluminium and stainless steel.</p>
<p><b>Handling and installation instructions</b></p>	<p><b>Preparation</b></p> <p>A prerequisite for the assembly of the AmbientTone No. 3 is the fixed installation of an AmbientTrack wall or corner pillar. Make sure that no loose parts or cables within the wall/corner pillar can cause vibrations or interference. Select the assembly height for the loudspeaker. Cut the panels of the wall/corner pillar to produce a "window" of 220 mm into which the loudspeaker can be inserted.</p> <p><b>Connection</b></p> <ul style="list-style-type: none"> <li>• Remove the transport locks (cardboard).</li> <li>• Use 2 x 1.5 mm<sup>2</sup> or 2 x 2.5 mm<sup>2</sup> loudspeaker cables, e.g. from in-akustik.</li> <li>• Pull the connection terminal off the loudspeaker. (Fig. 1)</li> <li>• Connect the connection terminal to the loudspeaker cable already laid. Observe the correct polarity.</li> <li>• Reconnect the connection terminal to the loudspeaker and fit the loudspeaker into the wall/corner pillar. (Fig. 2)</li> <li>• Connect the other end of the cable to the amplifier.</li> <li>• Observe the correct polarity (+/-) when connecting the cables.</li> </ul> <div data-bbox="1107 1025 1347 1339">  <p>Wall or corner pillar.</p> <p>220 mm</p> </div> <div data-bbox="1082 1361 1369 1496">  <p>Transport locks</p> </div> <div data-bbox="1075 1532 1219 1644">  <p>Fig. 1</p> </div> <div data-bbox="1244 1532 1385 1644">  <p>Fig. 2</p> </div> <p>Of course, the scope of delivery also includes full assembly instructions. <b>Product images</b>	
<b>Brief description</b>	<p>This speaker is specialized for deep bass reproduction and can be perfectly combined with the AmbienTone panels No.4, No.2, and No.1. This hi-tech in-wall subwoofer features a very low structure-borne sound thanks to its special design. Wall vibrations and the transmission of noise to neighbouring rooms are therefore reduced to a minimum, even without additional decoupling. The front of the subwoofer consists of a gypsum plasterboard. In the same way as AmbienTone No.4, it is screwed onto the substructure of drywall constructions and plastered over flush with the surrounding plasterboard. A 10 mm narrow slit acts as a sound outlet and can be positioned inconspicuously above the skirting board or close to the ceiling. The integrated special switch enables a direct connection to a standard amplifier.</p>
<b>Purchase order items</b>	<p>Scope of delivery</p> <ul style="list-style-type: none"> <li>• Subwoofer with connection cable</li> <li>• Installation instructions</li> </ul>

### PLANNING PROCESS FOR HOUSE BUILDING

General challenges for the contractor while planning the construction of a house:

Many decisions to be made in a very short time. You can't know today what tomorrow will bring. You can't be an expert at everything, and so you have to ask a specialist and, in other respects, do it "the way it's always been done".

For electrical installation this means: laying the cables in-wall, possibly even with empty conduits.

Consequence:

- Too few sockets and multimedia connections.
- Or more sockets planned than are actually needed later.
- Many sockets disappear behind furniture and are never used.
- Sockets are often in the wrong place and can be hard to reach.
- Even small changes involve a great deal of renovating work, combined with dust and dirt.
- Subsequent creative opportunities, e.g. using light, are severely limited.
- Building materials such as wood or concrete make slitting the walls difficult.
- Several power boards are often connected to one wall socket, so that the cables are overloaded. This leads to a fire danger\*.
- Cables lie around, and power strips collect dust and are trip hazards.
- Installation options for additional devices, e.g. ISDN, NTBA, DSL splitters or modems are missing, so that these extra devices often just lie around.

\*According to studies by the German Insurance Association, about one in every eight home fires is caused by electricity, or by electrical cables becoming trip hazards.

### AMBIENTRACK – A NEW LEVEL OF FREEDOM WHEN PLANNING AN ELECTRICAL INSTALLATION

For the first time, AmbientTrack offers a way to prepare an entire building with a simple, universal planning concept for all future requirements, without having to know exactly at the time of planning and initial installation exactly what goes where or will be needed in the future.

This concept involves laying a three-phase power cable (NYM 5x2.5<sup>2</sup>) as well as 2 to 3 data cables leading from the mains distributor into every room, which will, for the time being, end in the AmbientTrack pillars (in the tool boxes). This base installation is normally routed via the ceiling, walls or floor, and that will not change. This principle corresponds to the new house cabling standard EN50173-4.

The basic cabling ends in tool boxes within the AmbientTrack pillars, which are used as interfaces for 230-volt and data networks. From here the transition to flexible, freely modifiable cabling begins.

The installation is guided through the AmbientTrack ducts within a room. They provide sufficient space for the installation of switches, sensors and sockets, telephone and computer connections, electronic modules as well as lighting elements and even loudspeakers. The ducts can lead along the walls, or be installed flush with the walls.

Later changes are merely a matter of opening the cover, inserting the new components and replacing a few panels, at the most. And all of that functions without drilling and clouds of dust.

## UNIVERSAL PLANNING CONCEPT – IN 2 LEVELS.

- 1) **Basic cabling** – does not need to be changed
- 2) **Adding cabling flexibly** – which can be changed within AmbientTrack at any time

### A: Basic cabling

- NYM 5x2.5<sup>2</sup>
- 2–3 network cable cat. 6
- if needed, coax cable

### C: Adding cabling flexibly in AmbientTrack

- 230 volt mains
- Data and TV network
- 24 volt LED power supply
- Bus
- Multimedia network

## EXAMPLE

There are defined functional zones provided in the media pillar according to requirements. These can be activated anytime.

Cable configuration capacity of the wall pillar

### START

- Basic cabling (230 volt network/bus) ends in the AmbienTrack pillar (tool box as distributor box)
- The room's light cabling begins in the media pillar (tool box)
- Conv. light switch switches on room lighting (cabling with distributor box)
- Sockets are connected to 230 volts (cabling with distributor box)

## NETWORK EXPANSION

- RJ45 and TV connection sockets are connected to the home network
- Replacement of an AmbienTrack panel as well as a tool box (2-fold -> 4-fold)
- Simple network cabling within the AmbienTrack pillar

## ADDING A WALL SPOTLIGHT WITH RGB CONTROL

- 2 AmbienArt LED cubes are installed additionally
- Connect AmbienArt 24 DC power supply unit to the 230 volt distributor box
- Install AmbienArt controller in the tool box and connect to the power supply unit. (Replace tool box and panel; 2-fold -> 3-fold)
- Connect AmbienArt LED circuit electronics to the controller
- Place AmbienArt LED cube on top (replace panel)

Basic cabling 230 volts

Basic cabling  
network/bus cable

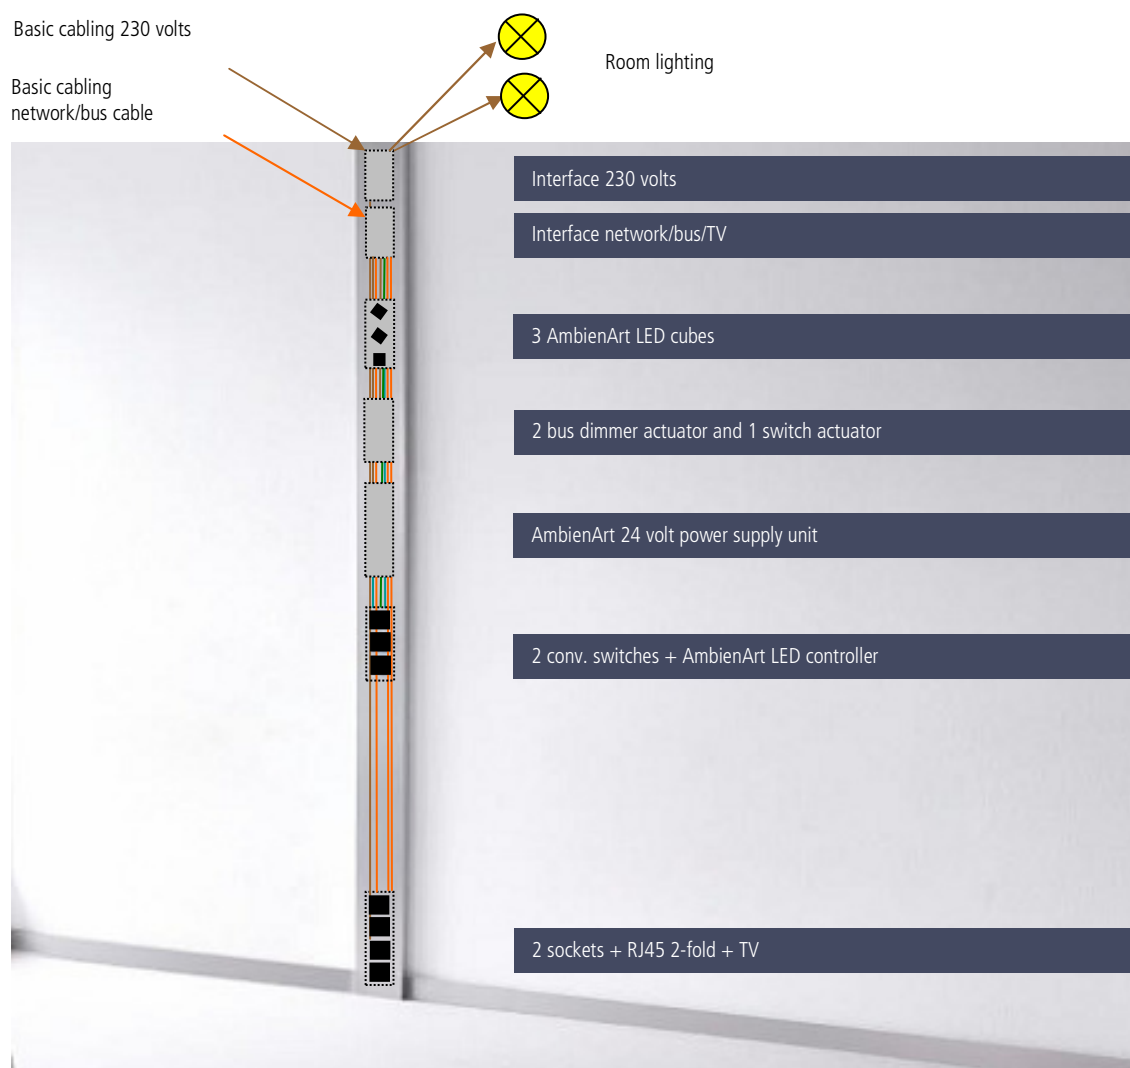

Room lighting

## ADDING INTELLIGENT BUS TECHNOLOGY (CENTRAL CONTROL + LIGHTING SCENARIOS)

- Connect bus cable to distributor box
- Replace conventional switches with bus buttons and connect to bus cable
- Install 2 bus dimmer actuators as well as a switch actuator in the tool box and connect to the bus cable
- Guide 230 volt cabling from distributor box to the dimmer and switch actuators

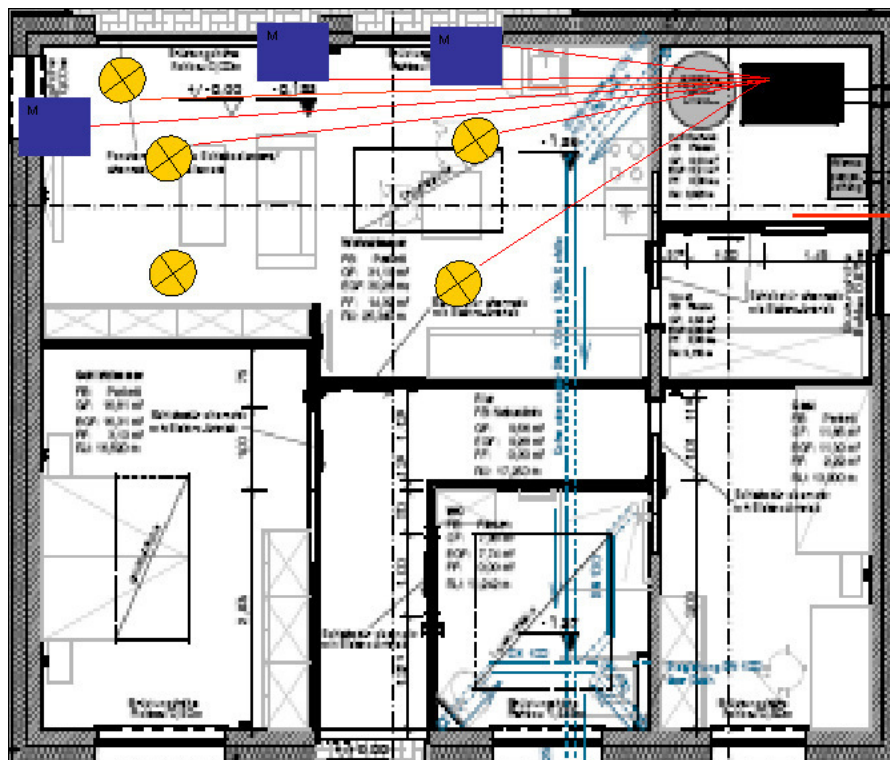

## INTELLIGENT BUILDING CONTROL WITH BUS SYSTEMS, E.G. KNX

- Central installation of the bus control electronics in the distributor box

Usual installation method:

- All consumer groups (lights, motors) are switched from a central point.
- Most switch actuators are located in the house and storey manifold.
- A very large amount of cable – min. one cable per switch group (lights, motor...), and additional bus and network cables, will accumulate.
- Exact and detailed planning is required, as the installation position of lights and motors must be finalised for the cabling.
- Subsequent changes to position are extremely time-consuming

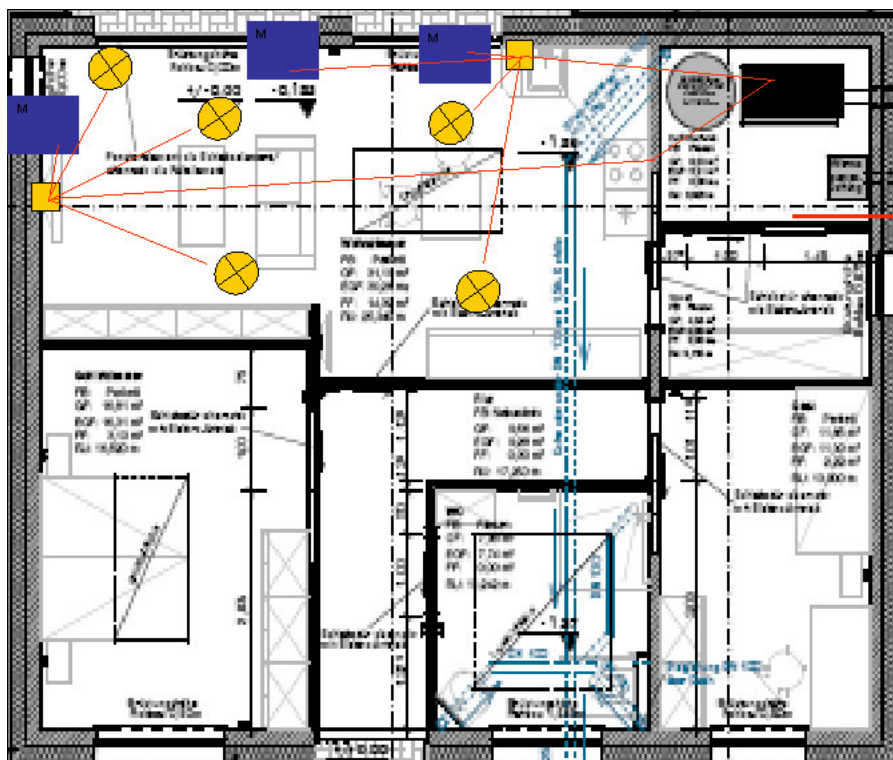

Bus actuators in the central distributor:

Using a living room as an example, the problem of cable accumulation when all actuators for controlling the consumers are in a central distributor is easy to recognise. Construction problems are pre-programmed. Subsequent additions, e.g. electric blinds, required a great deal of work.

## AMBIENTRACK – DECENTRALISED INSTALLATION OF THE BUS CONTROL ELECTRONICS IN THE WALL OR CORNER PILLARS

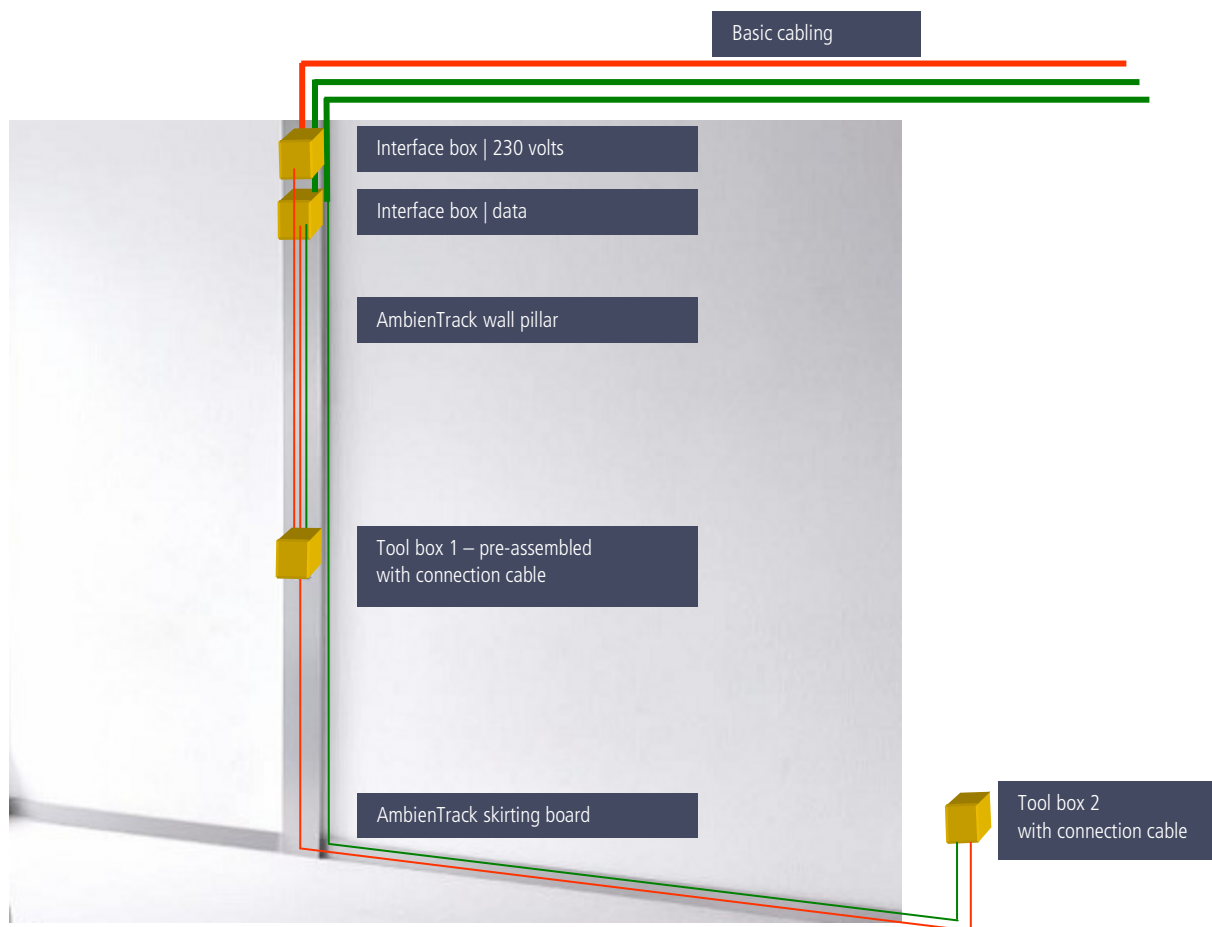

- Accessible installation zones in every room
  - Decentralised control electronics – close to the consumers.
- All consumer groups (lights, motors...) are switched from a central point in the rooms.
  - The switch actuators are placed close to the consumers in the rooms – short paths to the consumers. Less need for space in the distributor box – no problems when upgrading.
  - Bus buttons and sensors are installed in AmbienTrack.
  - Additional sources of light on the AmbienTrack pillars – also possible later on.
  - Variable sockets, even after furnishing.
  - Minimal accumulation of cables – only one power and one bus cable, plus 1 to 2 network cables per room
  - Standardised overall planning, regardless of the actual connection points.
  - Subsequent positional changes are quick and easy, without dust and dirt.

Bus actuators decentralised in AmbienTrack:

The decentral concept means that the cable volume can be reduced by more than 50%. Subsequent additions are possible any time, as the room required for housing the actuators is provided in the AmbienTrack duct.

## PLUG&PLAY INSTALLATION

The 230-volt and data interface boxes are installed in the wall pillar. The tool boxes, with pre-assembled connection cables for power and data, are also installed in the wall pillar. The connection cables are plugged into the interface boxes. The cables are guided within the skirting board on to the other tool boxes. The asymmetrical structure of the skirting board means there is enough room within the skirting board to join together the connection cables.

Extension of the connection cable in the skirting board

Tool box with pre-assembled connection cable

## THE COMPARISON PROVES: AMBIENTRACK PAYS OFF!

Cable ducts made of aluminium? How much does that cost? Not that much – as the direct comparison shows. AmbientTrack may be somewhat more expensive in comparison to standard installations when first installed, however even small changes reverse the ratio. Sockets which are added later or repositioned, or newly installed cables, quickly counterbalance the costs. When it comes to larger improvements, such as installing a flat screen TV, additional switches or wall spotlights, AmbientTrack is not just faster to retrofit, but also up to 30% cheaper than in-wall installation. And that also applies for the renovation of electrical installations in old buildings. In short: if you think in the long term, you're better off choosing AmbientTrack.

And another thing: If you wish to equip your own home with intelligent building automation technology, with AmbientTrack you'll benefit from having most control components installed in the AmbientTrack ducts, and therefore making decentralised distribution in the building possible. That reduces the overall cabling work, as the switch groups are always positioned close to the consumers. No long expanses of cable, no accumulation of cables around the distributor – everything is at hand, as well as direct access to the entire control electronics via AmbientTrack. It couldn't be easier!

### Economic efficiency: Summary:

- For a new building, an in-wall installation is only cheaper in the short term.
- Even a small change will lead to virtually the same costs.
- For larger changes, the flexibility of duct installation pays off.
- A duct installation is considerably cheaper when electrical installations have to be modernised.

## SKIRTING BOARD DUCT AS A SIDE RAIL DUCT:

- Console installation
- Installation of skirting board duct, lower part
- Floor covering
- Wall plaster/wall paper
- Installation floor duct, upper part

## SKIRTING BOARD DUCT AS A CEILING DUCT:

- Substructure installation/suspension
- Gypsum plasterboard ceiling installation
- Floor duct, lower part installation
- Ceiling paintwork
- Installation floor duct, upper part

## SKIRTING BOARD DUCT AS A FLOOR DUCT:

- Side insulation strips
- Floor duct, lower part installation
- Foil
- Casting screed flooring
- Floor covering
- Installation floor duct, upper part

## SKIRTING BOARD INTEGRATED IN DRYWALL CONSTRUCTIONS:

- Wall construction on screed flooring
- Erecting the upright profile
- Installation adapter
- Affixing the gypsum plasterboards
- Floor covering
- Installation of skirting board duct, lower part
- Wall plaster/wall paper
- Installation of skirting board duct, upper part

## COMPACT WALL PILLAR INTEGRATED IN A DRYWALL CONSTRUCTION:

Plasma duct | Shadow gap

### Wall construction on screed flooring

1. Erecting the upright profile
- Installation adapter
- Affixing the gypsum plasterboards
- Floor covering
- Baseboard installation
- Wall plaster/wall paper
- Cover installation

## COMPACT WALL PILLAR INTEGRATED IN A DRYWALL CONSTRUCTION

Plasma duct | flush with joint

### Wall structure on the floor covering

1. Floor covering
- Erecting the upright profile
- Installation adapter
- Affixing the gypsum plasterboards
- Plasma duct lower section installation
- Wall plaster/wall paper
- Plasma duct upper section installation

## HOTEL HALL SOLUTION SCENARIO

- AmbienTrack wall pillars with integrated control units for a hotel room
- AmbienTrack wall pillars with wall spotlight for indirect ceiling lighting
- AmbienTrack skirting board with orientation light

- AmbienTrack wall pillars
- Room numbering (illuminated)
- Socket for cleaning staff

## FOYER SOLUTION SCENARIO

1) AmbienTrack corner pillar as an installation shaft from the cellar to the attic with:

- Bus button – Central off
- Bus button – Hall/exterior light
- Motion sensor

2) AmbienTrack tool box with:

- Sockets
- Telephone connection

3) AmbienTrack skirting board with orientation light

1) AmbienTrack wall pillar with:

- Bus button – Central lights/blinds
- Video intercom

2) AmbienTrack wall pillar with:

- Socket for cleaning equipment
- LED strip for accent lighting

3) AmbienTrack skirting board with orientation light

## LIVING ROOM SOLUTION SCENARIO

1) AmbienTone No. 1 for the front loudspeaker for the Dolby Surround System.

2) AmbienTrack wall pillar, flat, for LCD cabling

3) AmbienTrack skirting board with AmbienArt LED strip for room effects light

4) AmbienTrack wall pillar with:

- Interfaces for 230 volts and network
- AmbienArt LED cube for indirect ceiling lighting and accent lighting
- AmbienArt LED strip for room effect lighting
- AmbienTone No. 3 as a rear channel loudspeaker for the Dolby Surround System
- AmbientArt RGB controller
- Bus room control device for light scenarios, blinds and temperature regulation
- Socket for cleaning equipment

5) AmbienTrack wall pillar, half room height, with:

- Sockets for TV receiver, hi-fi system, floor lamp
- Coax and network connection for TV receiver
- HDMI connection for cabling to the LCD TV
- Audio jacks for loudspeaker cabling

6) AmbienTrack wall pillar with:

- Bus control units for the motor powering the blinds, and lights
- AmbienTone No. 3 as a rear channel loudspeaker for the Dolby Surround System
- Bus button for blinds, terrace lighting and lighting scenes
- Sockets + audio connection for subwoofer

7) AmbienTrack wall pillar with:

- AmbienArt LED cube for indirect ceiling lighting
- AmbienArt LED cube for object illumination

## OFFICE SOLUTION SCENARIO

1) AmbienTrack skirting board duct installed in the screed flooring, with sockets and network connections for double workplaces, blind control electronics for automatic shading.

### ABOUT LIGHT:

Light has an influence on our lives in numerous ways. Colours express emotions and moods, dynamic colour temperatures influence our biorhythms, the transition from light and dark creates suspense, light points and lines focus our attention and the lighting level influences our powers of concentration. Furthermore, light is a design factor and stylistic device for architecture. In contrast, monotonous light, for example, rapidly causes fatigue and boredom, glare can disrupt our sense of well-being and insufficient light or gloom hinders orientation and provokes insecurity. It is therefore both worthwhile and important to use light to have the most positive impact possible on people, especially in buildings and rooms in which people frequently spend long periods.

### CURRENT SITUATION:

Unfortunately, previous lighting solutions in residential buildings often only consist of providing one light in the middle of the ceiling for each room, possibly a lamp hanging above the dining table. This produces a general light at best, but the opportunities which light offers to produce positive effects in rooms are sadly neglected. When you wish to realise additional lighting solutions at a later point in time, it often runs into trouble due to the lack of available power connections.

### TASKS WHEN PLANNING LIGHTS:

#### Basic illumination:

The basic illumination creates a background light in the entire room or in individual areas, so that the room is always appropriately and evenly lit for its current use (correct amount of light can be regulated, glare-free, no shadows, colour temperature...)

#### Accent lighting:

Accent lighting allows the eye's focus to be guided, creating a variety of different moods. It is possible to play with light and shade and to create dynamic changes of colour, or to illuminate specific objects.

#### Lamp choice:

The choice of lamps should underline the general architecture of the room, without placing the actual lamps too prominently in the foreground. Material and design play an important role in doing so.

To fulfil these tasks, several different sources of light are required, which must be arranged in the right positions (ceiling and walls).

**Basic illumination:**

**Accent light:**

**Lamp choice**

## BASIC CABLING

All lighting components in the AmbienArt system are supplied using 24 volt DC. The LED circuit electronics are pre-assembled in the tool boxes. The system connection plugs are easily accessible at the end section of the tool box.

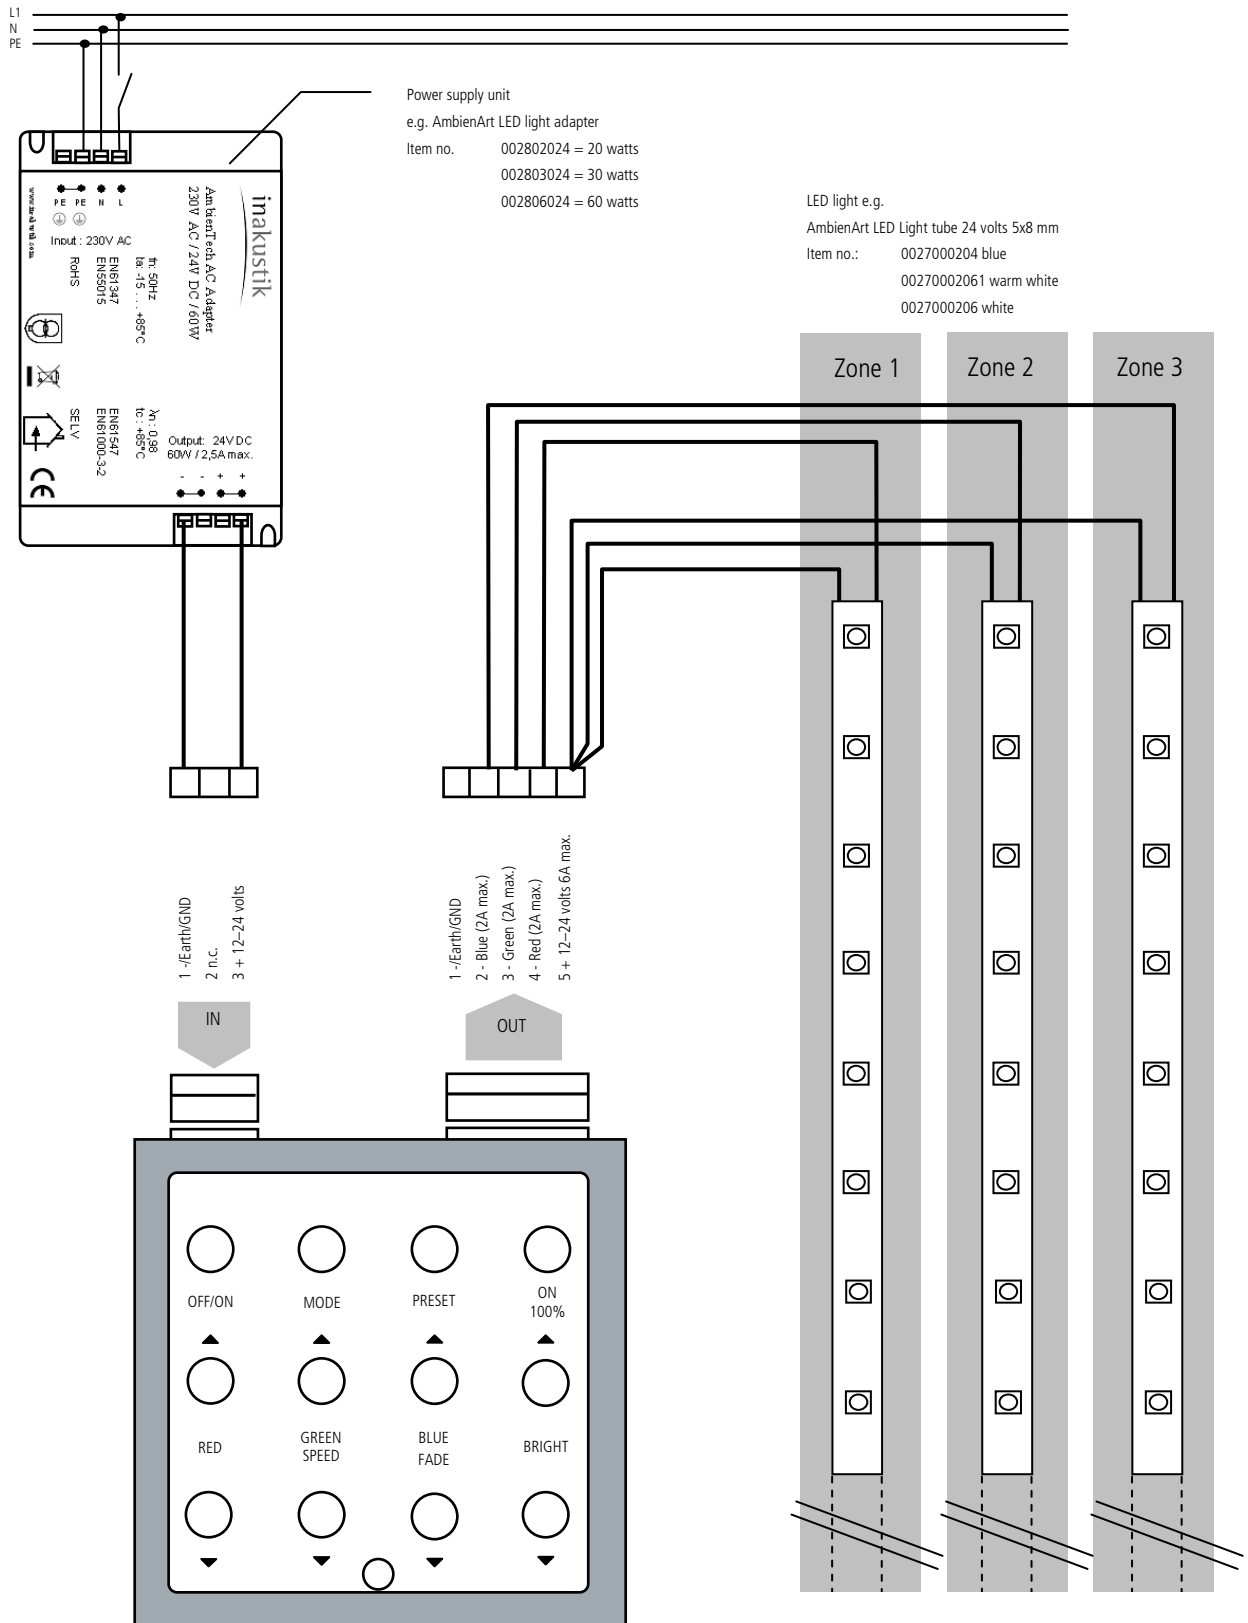

Dimming, or RGB control for the AmbienArt light components, is possible using the system controller. All AmbienArt light components are connected to the controller using the quadripole RGB system cable.
